

F Bamford & Co Ltd was founded in 1903 and for over a century has been supplying equipment to the very demanding naval and commercial marine market.

Ocean going ship owners insist on the very best equipment designed to last the lifetime of the ship (40-50 years ) and of ultimate reliability as breakdowns at sea can have wide ranging and even fatal consequences.

By employing best practice design techniques and utilizing the very best quality materials, Bamford's have earned an excellent reputation of satisfying these demanding requirements and supplying products that are second to none.

When Bamford Doors was formed in 1984 it was decided to use the same philosophy for the design and manufacture of our range of security doors, as we could see that the customer requirements were similar to the marine market.

An example of this is the stainless steel hinge we use. Not only is it made from 25% thicker material than our competitors, it has twice the number of interleaves, which gives it 3 times the load bearing surface area and thus 3 times the life expectancy.

This approach is applied throughout the design and specification of our door set and we believe that our product will outlast all others by a considerable margin. It will also require much less maintenance than the opposition. We are so confident in our product that we back up our claims by providing a lifetime guarantee.

Below are recently taken photographs of two different installations installed over 20 years ago.

Lloyd Gardens, Altrincham  
installed 1987

Hesketh Road, Stafford.  
Installed 1990

**Although we are not the cheapest door on the market, when whole life costs are compared we believe we are the very best value for money of any door available.**
